MONTHLY UPDATE

Cum NAV per unit was \$1.0132 and cash distribution was \$0.0030 per unit. Total NAV of the Fund was A\$14.1m.

The global market traded higher in September and remains near 52W and all-time highs. The price of risk, as measured by the VIX, has fallen significantly since October 2022 level of 32.02, reducing the cost of protection. Early in September the price of risk and protection was relatively stable, with a slight increase closing September at 16.73.

This relatively stable volatility and narrow index range saw a moderate underperformance Vs our benchmark.

The investment strategy is designed to mitigate large losses on major market falls (downside protection always in place) and address sequencing risk, particularly for pre and post retiree investors, and is part of an “International equities” portfolio allocation.

The Class buys and holds S&P 500 ETF with the lowest cost index option protection always in place and dynamically managed given the liquidity and scalability.
